Reasons for Allowance

6. The following is an examiner's statement of reasons for allowance:

A verification device for the visual verification of the angle-dependent scattering behavior of a document based on its light-scattering properties, comprising a document-holding device, a measuring window, an observation window that can be viewed by an observer with naked eye, a light feed that trains a bundle of nearly parallel light beams at a predetermined angle α with respect to the measuring window, the angle α of each nearly parallel light beams being allowed to vary within 10^{0} , and a light guide for capturing a plurality of light beams exiting from a point on the measuring window at different but adjacent angles β_{1} , β_{2} , around the same point, and displaying them simultaneously in parallel or convergingly in the observation window to enable an observer with naked eye view a scattering pattern from the document, as recited in claim 32 (original numbering), is neither anticipated nor rendered obvious by any prior art.

Claims 33-35, 37-44 and 46-61 are also allowed because of their dependencies, either directly or indirectly, upon claim 32.
